Technical Architecture

In this document we will set up an account on anaconda cloud to execute the python code to upload the data files in AWS S3 bucket from the local machine using a notebook.

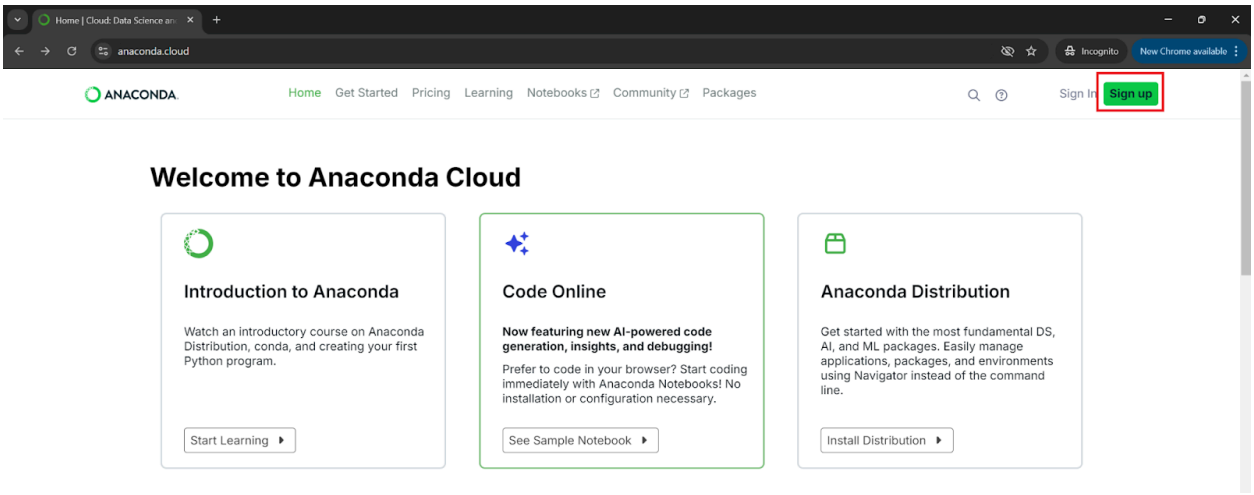

Anaconda Cloud Setup to Execute python Script

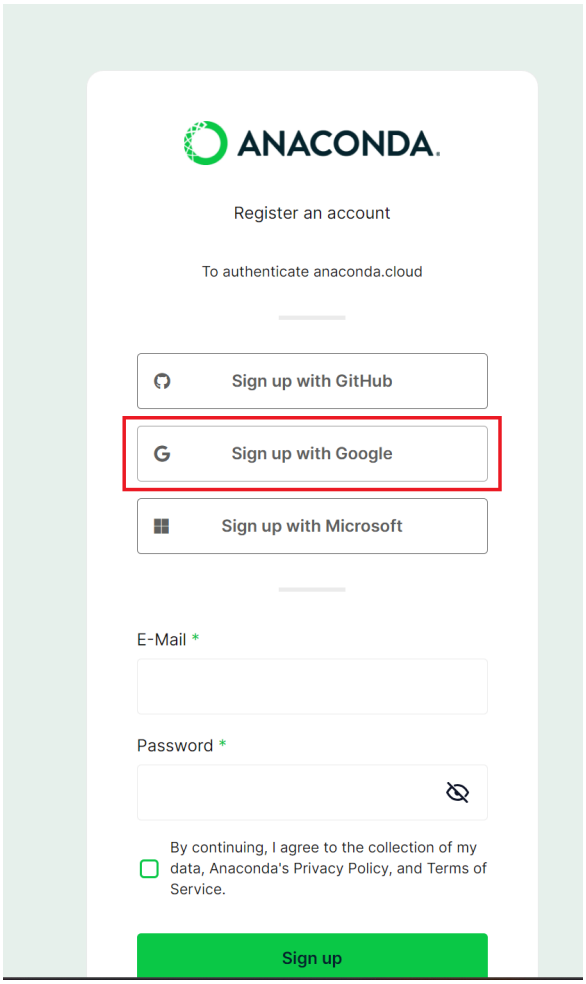

- Open the below URL in your browser
  - https://anaconda.cloud/

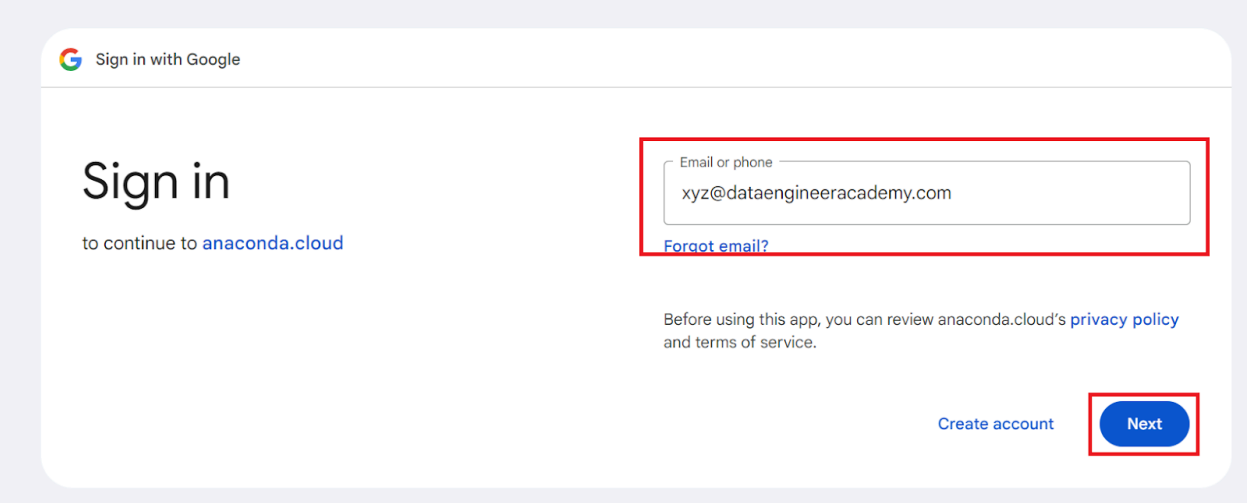

- If you have already an account created in Anaconda Cloud, please click on Sign In else to create a new account Click on Sign Up

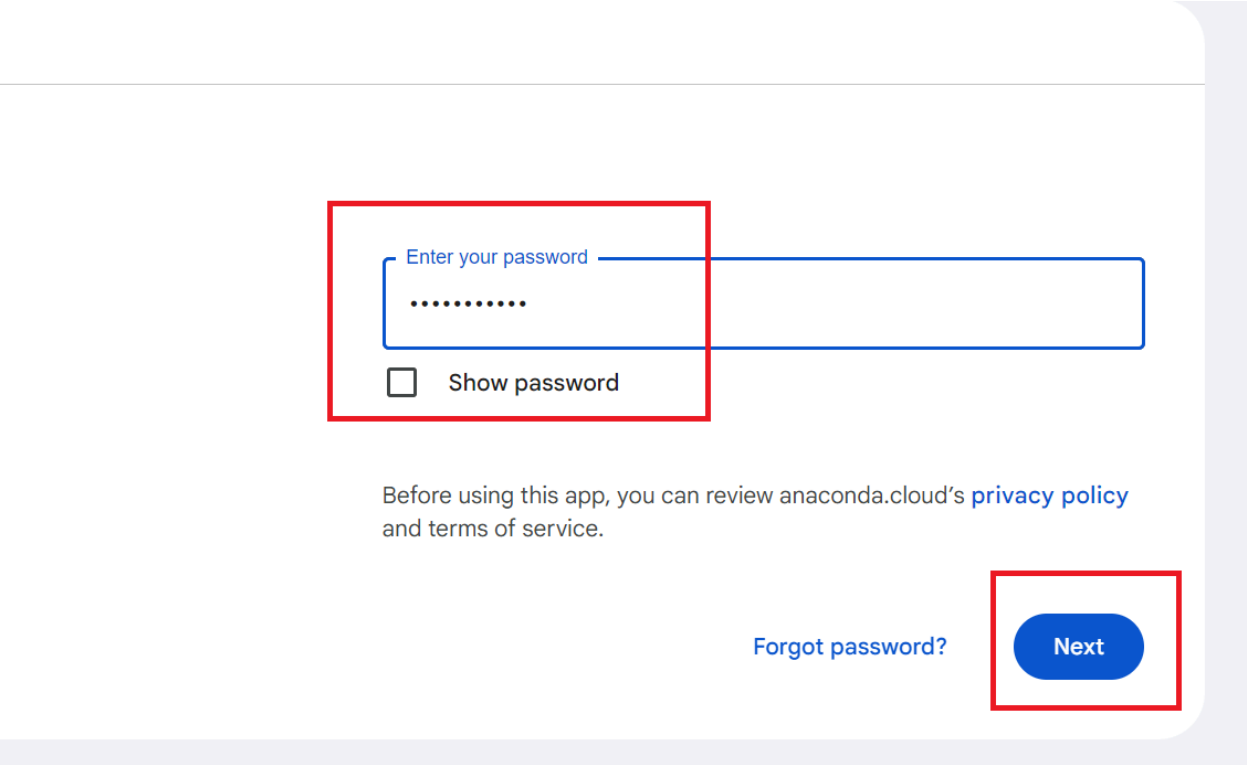

- On the Next page Click on the Sign up with Google option, to proceed further.

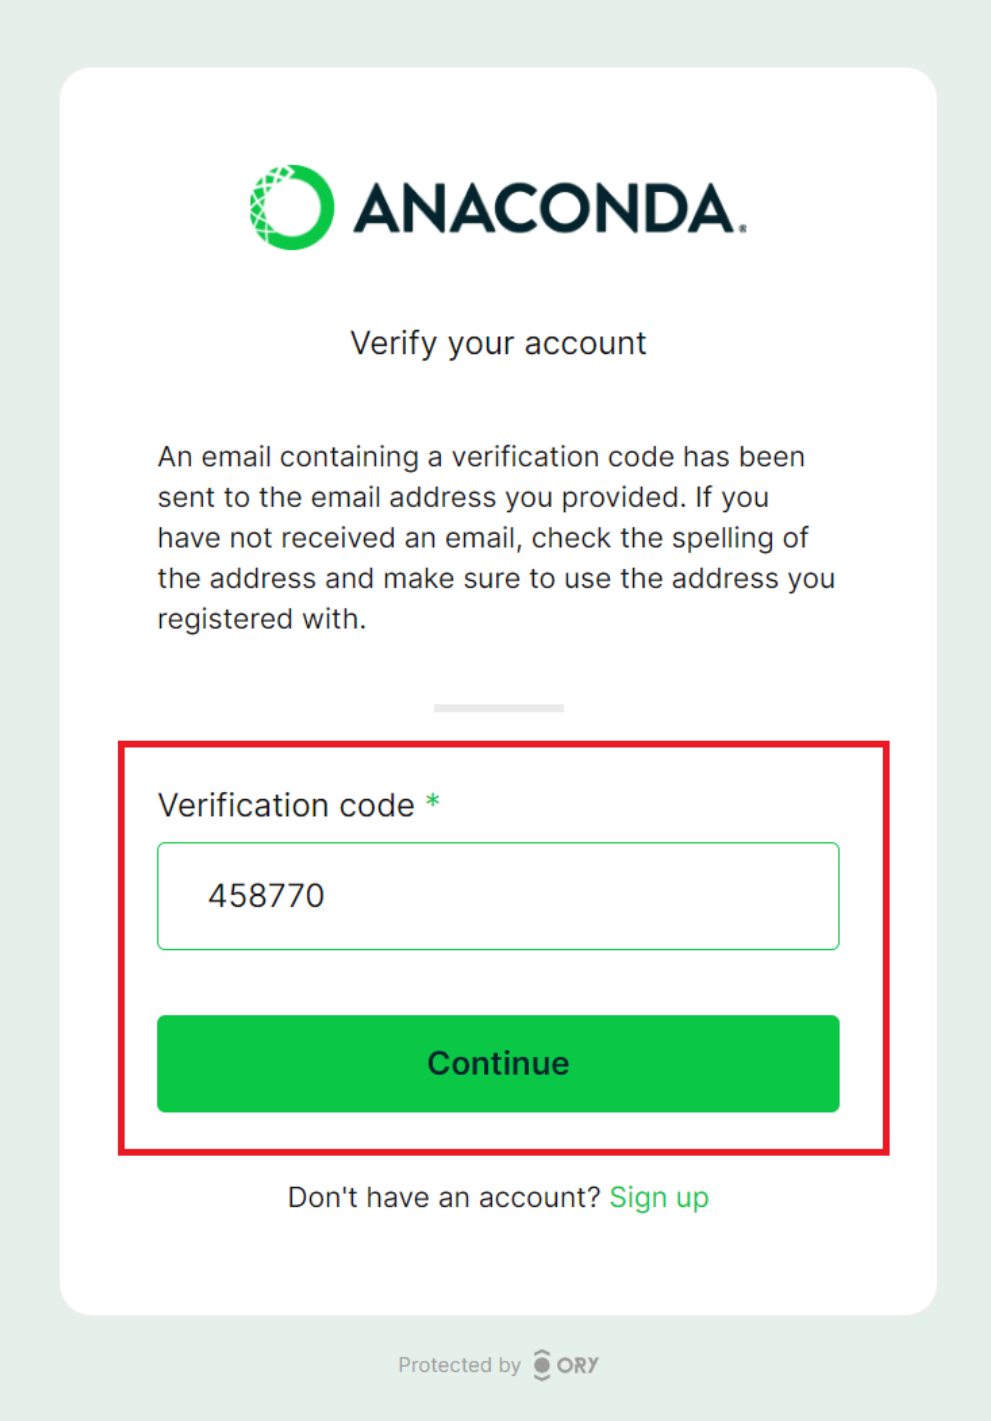

- Provide you gmail email id on the next page and click on the Next button

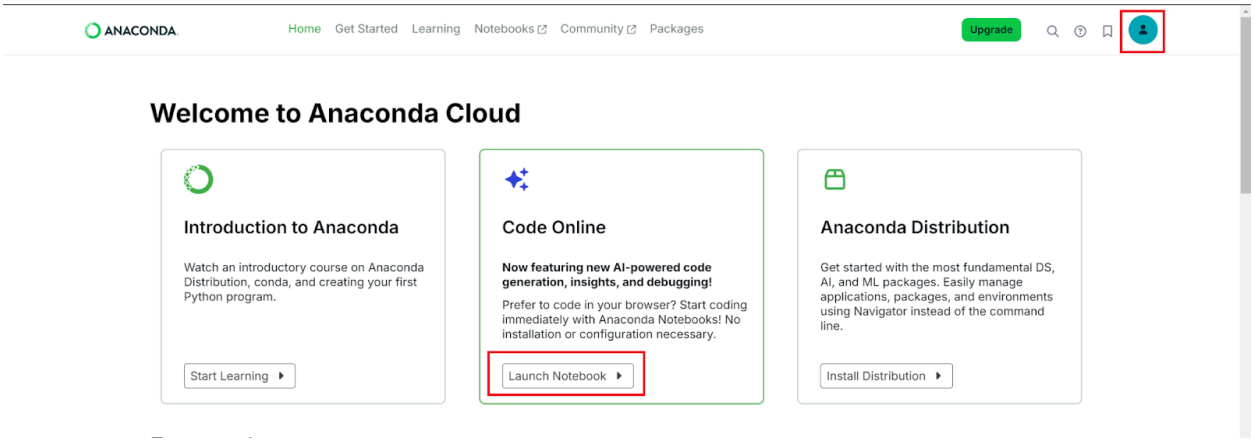

- Provide your respective password of gmail email id on the next page, and click on the Next button.

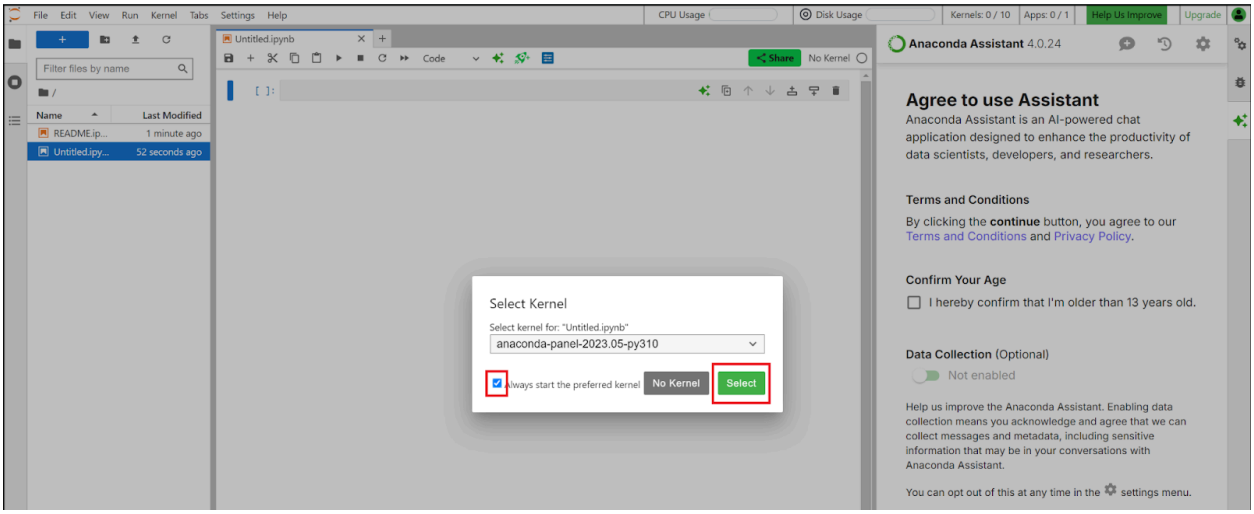

- Once after verifying your gmail email id, you will receive a verification code of your respective gmail id, please enter the same in the below page and click on Continue button.

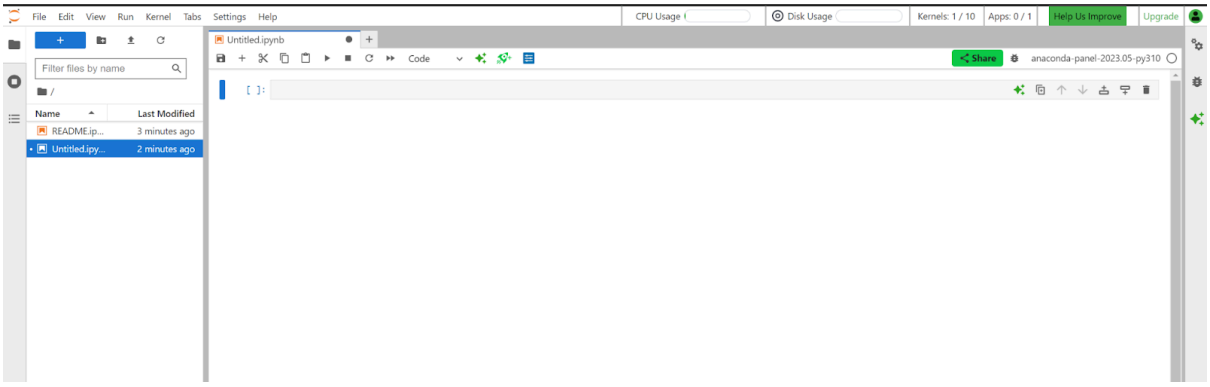

- Once you Sign up successfully, please click on Lunch Notebook option on the next page to open a new anaconda notebook to set up your python code for the further processing.

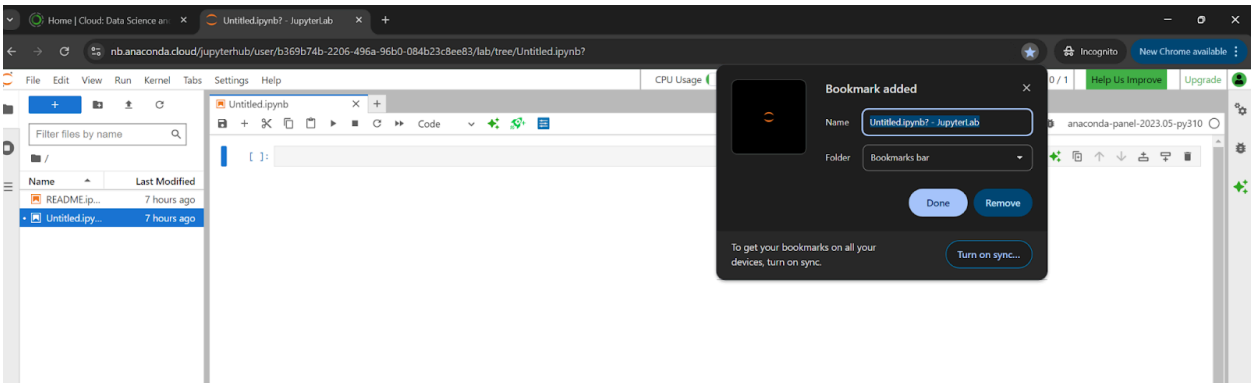

- On the next page check the below checkbox and click on click on Select button to select the default kernel for your notebook

- Now you have successfully setup you notebook in Anaconda cloud to write respective python code to access AWS S3 bucket and upload the data file for the SCD1 project

- Please Bookmark this URL for the future reference

VOILA! YOU HAVE SUCCESSFULLY COMPLETED THE NOTEBOOK SETUP IN THE ANACONDA CLOUD
