Tableau Desktop Integration with Snowflake

In this document we are going to integrate Tableau Desktop with Snowflake account.

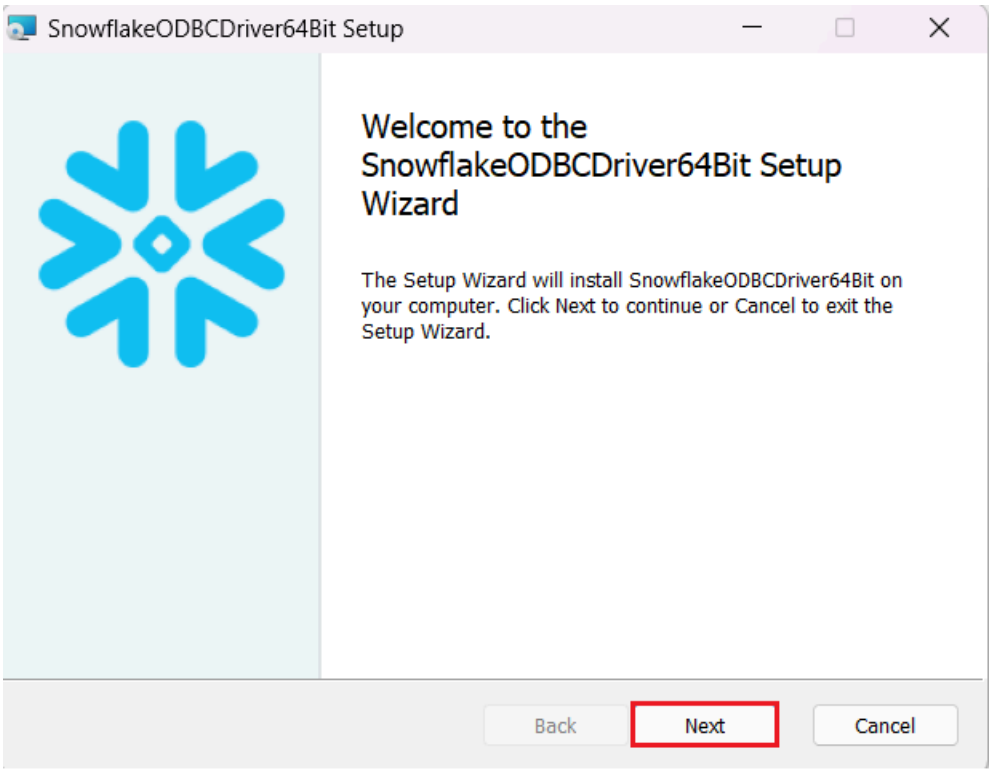

Step 1

- **We must download the ODBC connector from your Snowflake account. Go to https://developers.snowflake.com/odbc/ and select your operating system like below.**

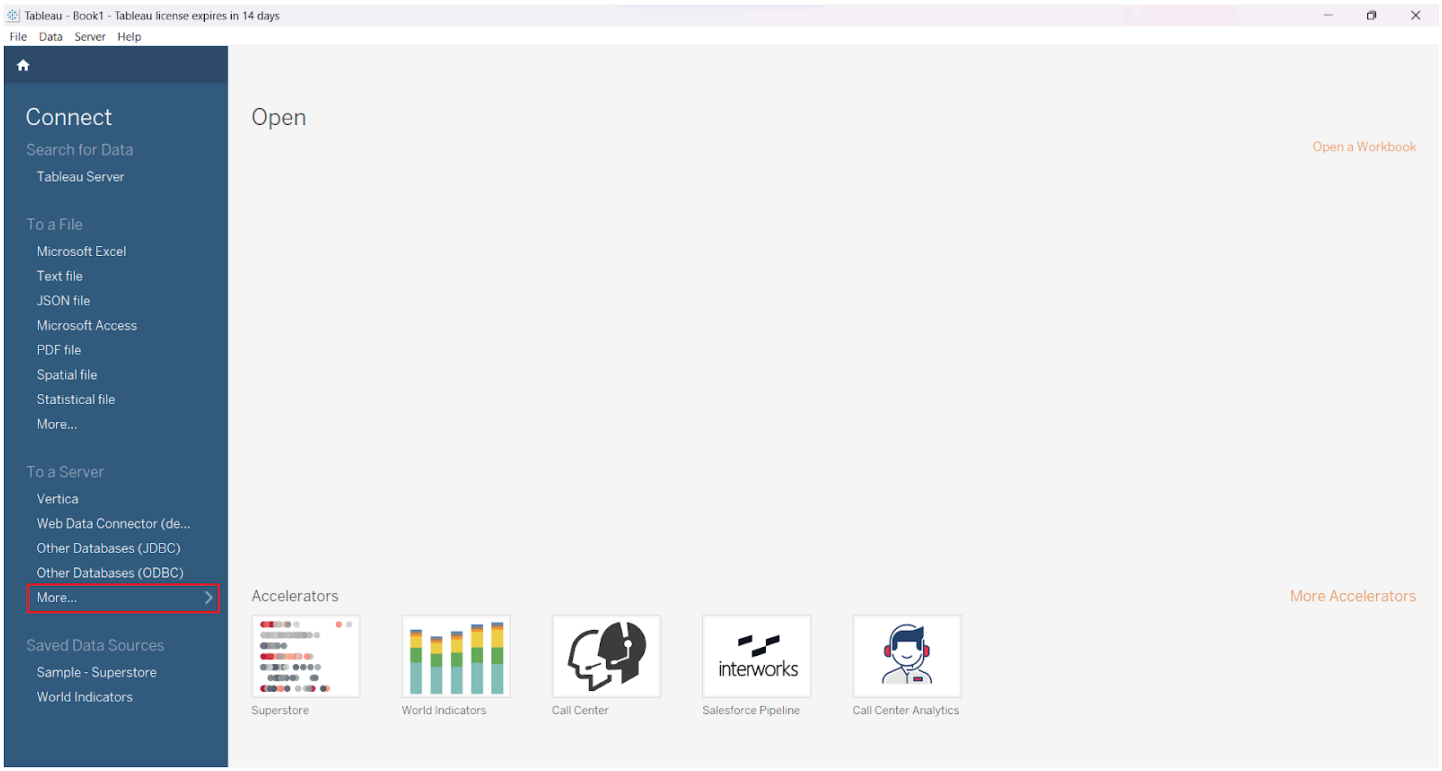

- **After it is downloaded, go to Downloads and double click on the file to install it. Follow on screen instructions.**

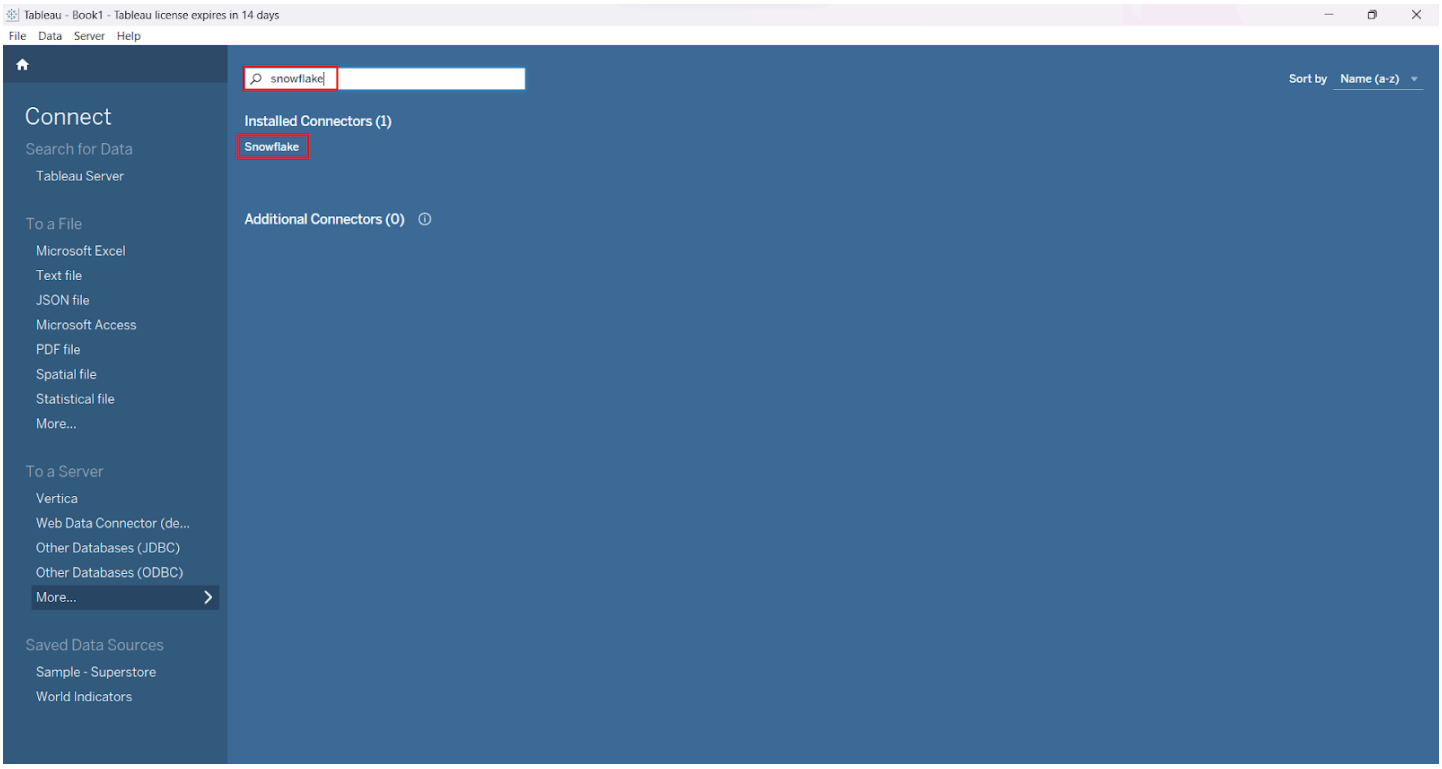

Step 2

- Go back to your Tableau Desktop and then under Connect section click on more.

- Then type Snowflake in the search bar and click on it when it has been found.

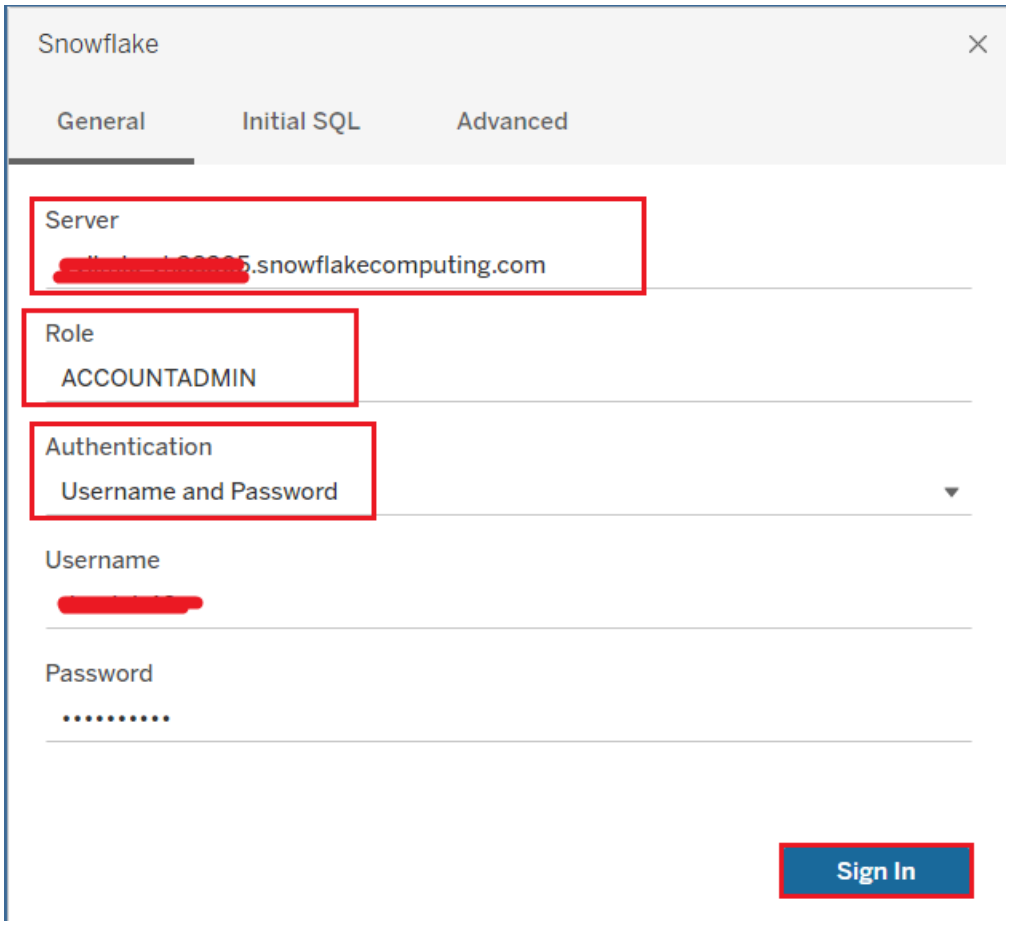

- Then the Snowflake login box will open. Fill in your Snowflake account url (server here) and select the role of Snowflake account and then select the authentication method.

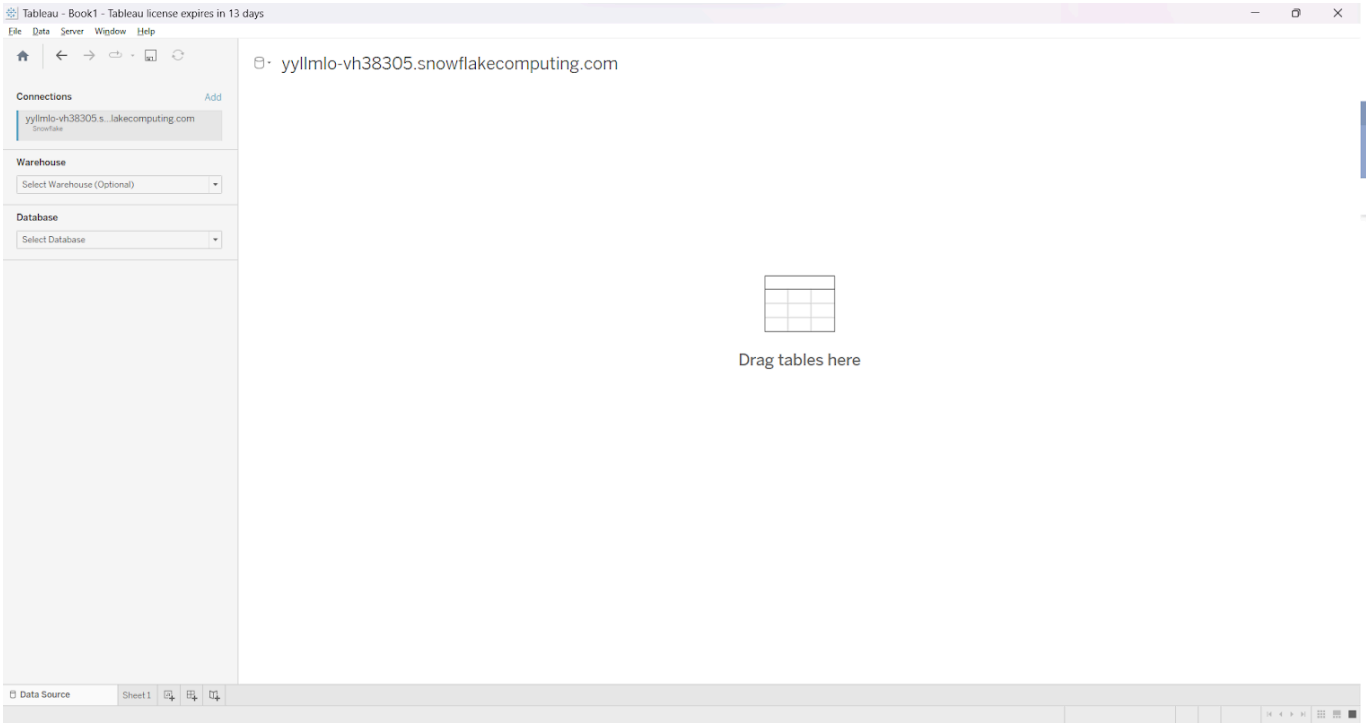

The server is only the portion starting with your unique id and '.snowflakecomputing.com'.

Add your Snowflake username and password to connect.

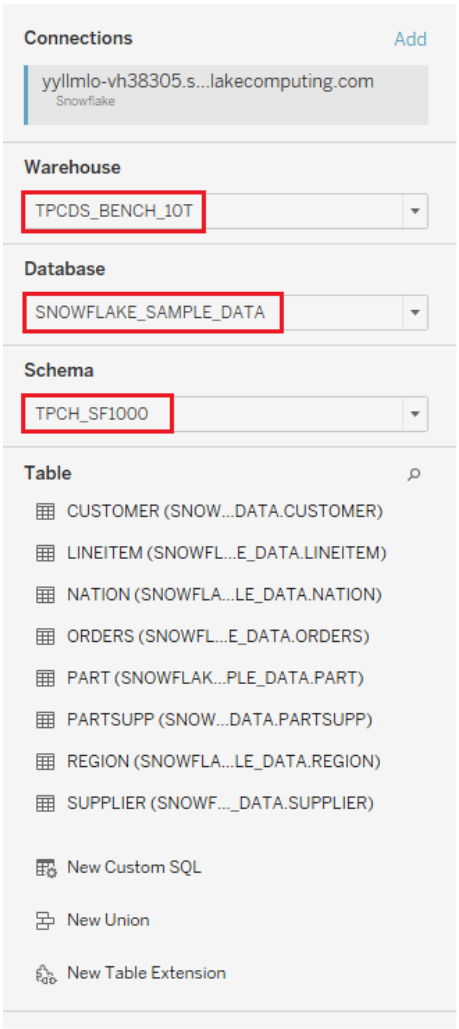

Then click on Sign in to continue.

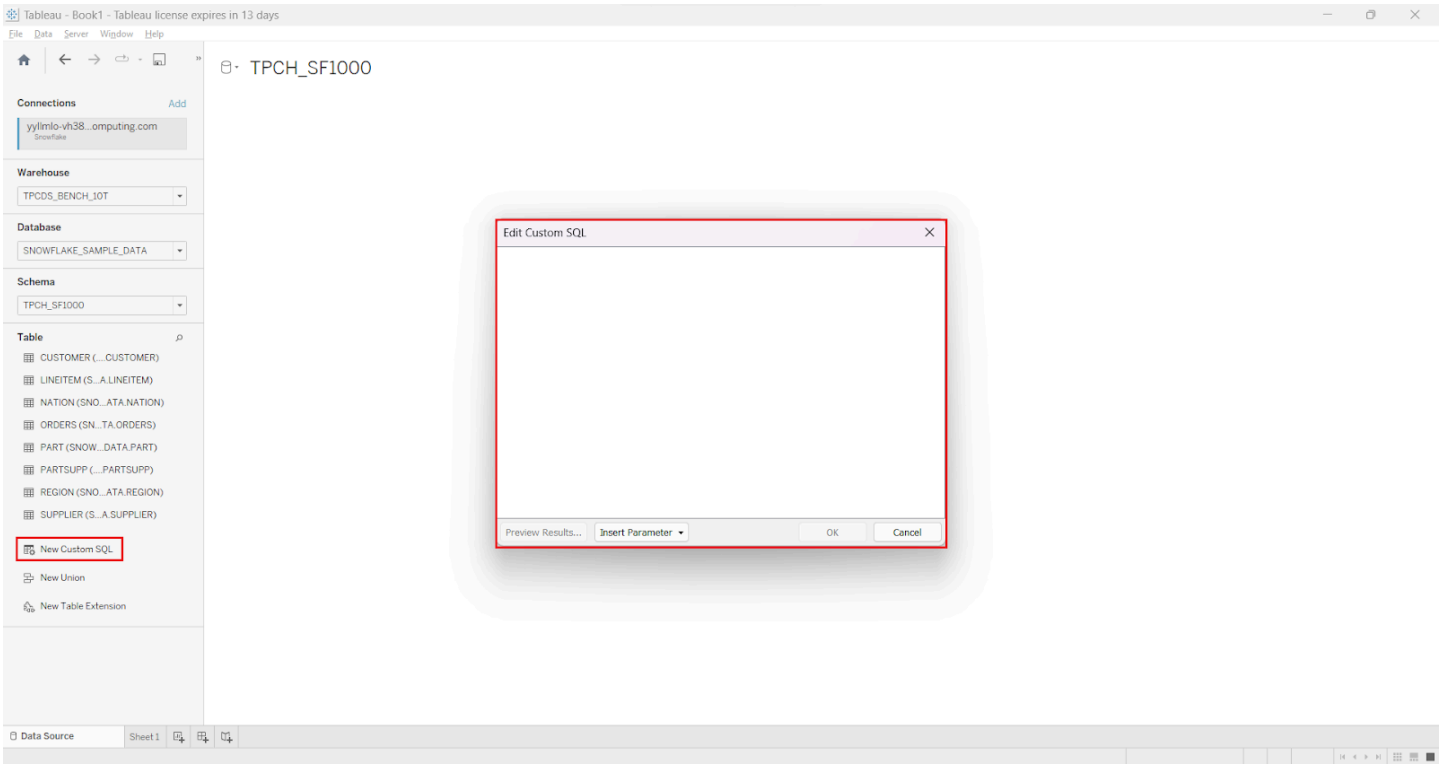

- After you have connected you will land on main page.

- Next click on the Warehouse list and select your warehouse as shown, then Database list to select your database and lastly click on Schema list to select your schema. Automatically you will be able to see your tables.

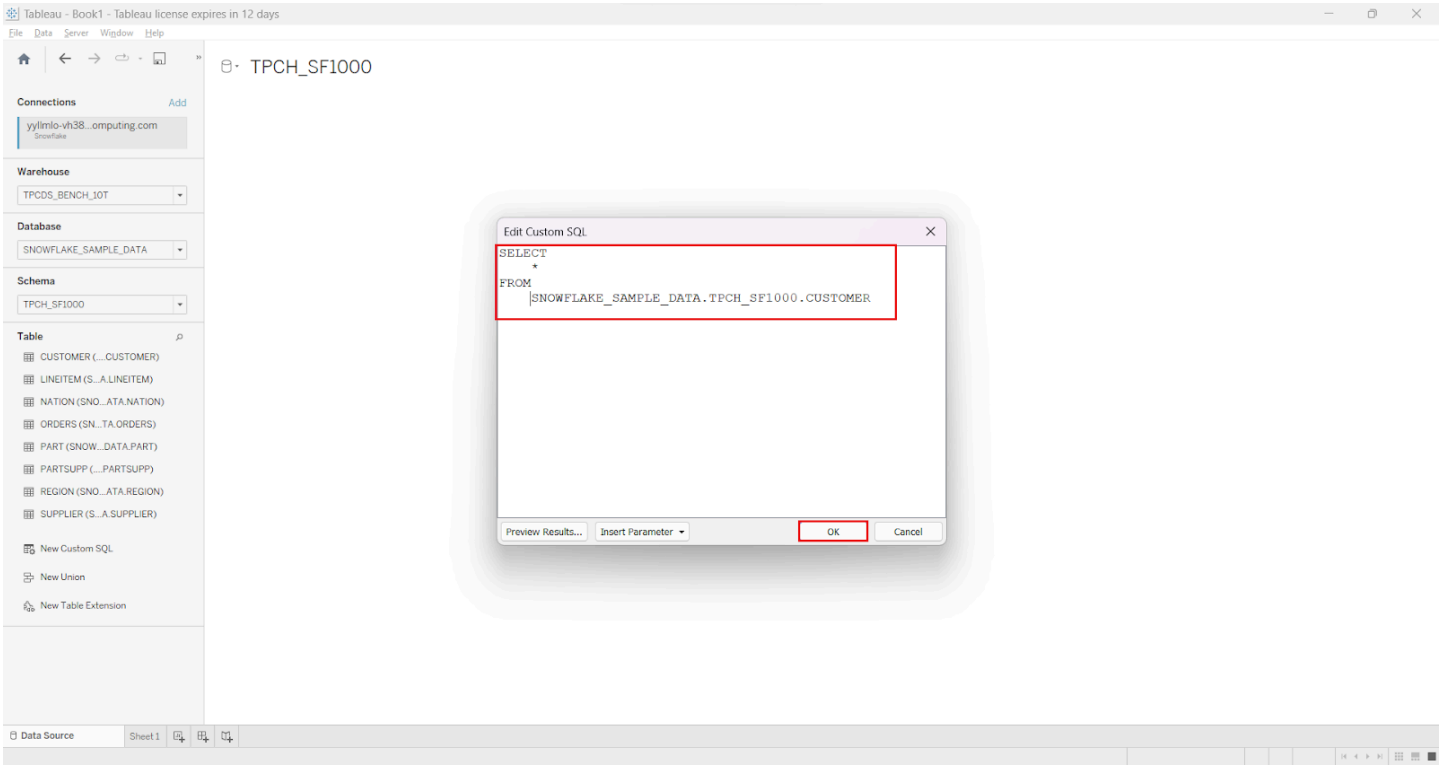

- Now on the left-hand side you will see New Custom SQL which you have to drag on the right hand side and a new query pane will open.

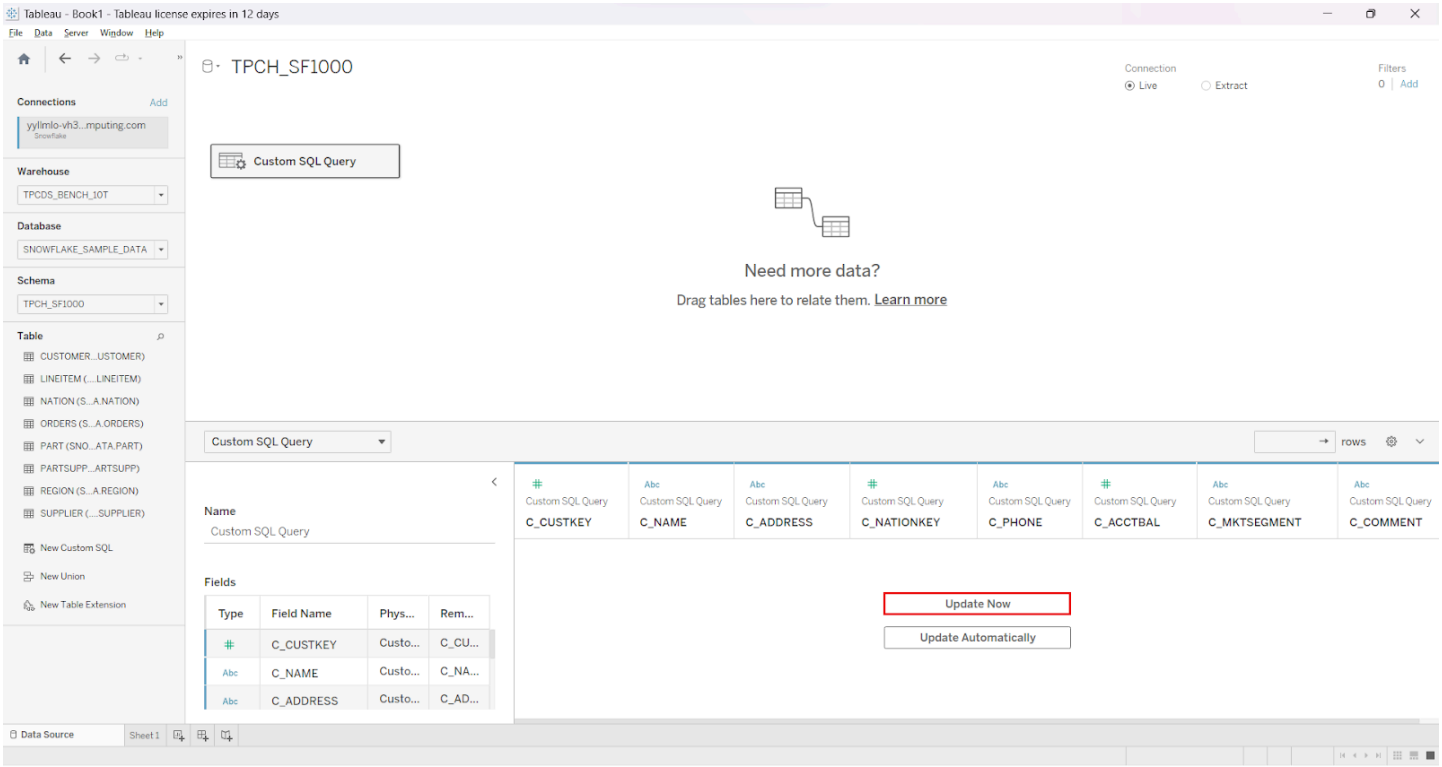

- Write a custom SQL query to test your connection. After you have written click on OK to proceed.

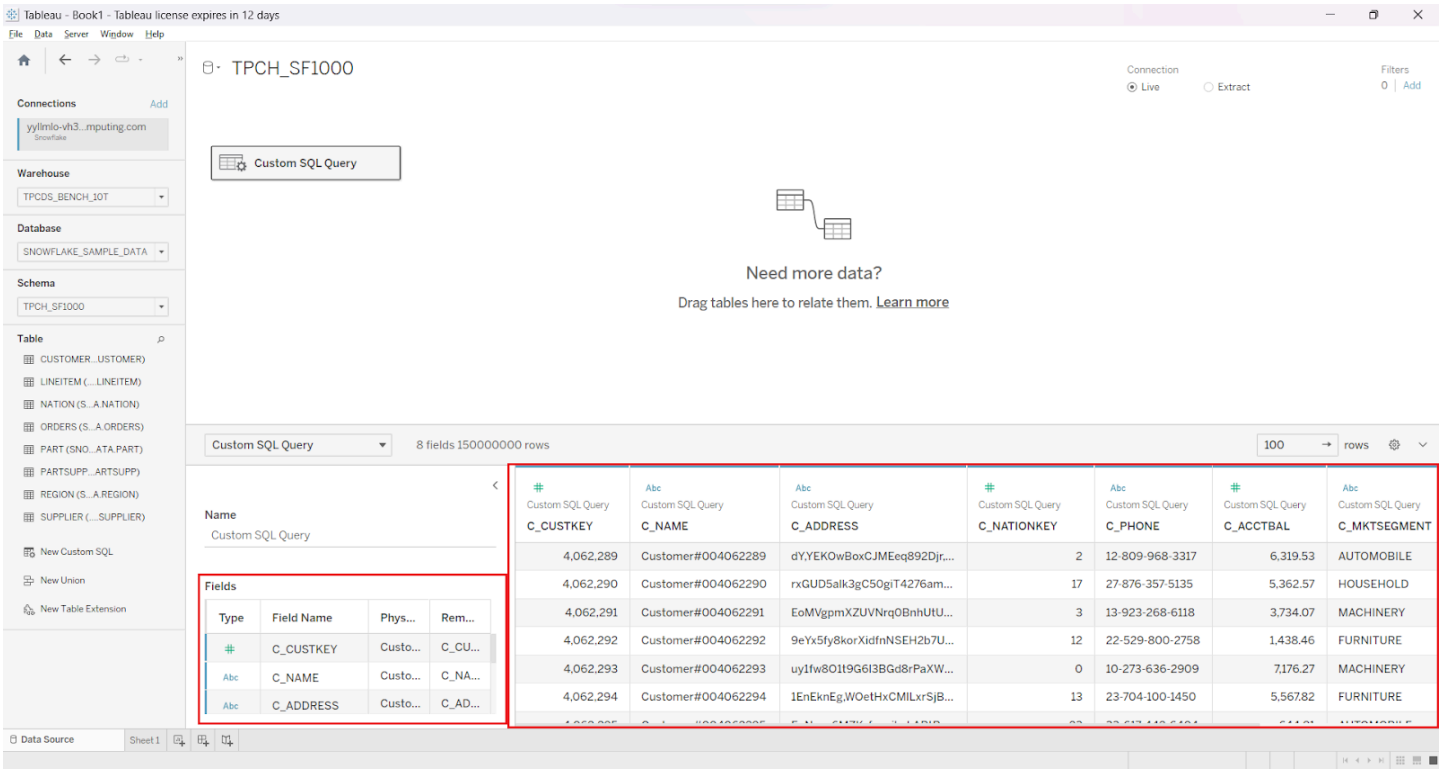

```
SELECT
  *
FROM
SNOWFLAKE_SAMPLE_DATA.TPCH_SF1000.CUSTOMER
```

- Then you will see the table data has been accessed and you must click on Update Now to view the data in the data source pane.

- After this you will be able to see your data in Tableau Desktop. You can see the table details as well.

YOU HAVE SUCCESSFULLY INSTALLED TABLEAU DESKTOP
